

CONSTRUCTION PERMIT SUMMARY REPORT

Company Name: Midway Concrete Products, Inc. File Number: 03-0039 EPS Initials: AJP
 Permit Number(s): 982122 (082122) Source Point Number(s): 01
 Application Received (date): 1/26/2024 Application Complete (date): 7/15/2024
 Air Quality Analysis Performed? Yes No

Briefly describe the project: (new source, modifications) (what the process is) (type controls proposed) (emissions expected, qualitative) (replacing what sources) (background information)

SIC Code 3273 – Ready-Mix Concrete

This concrete batch plant operation (Source 01) is an existing air contaminant source. The process of this new source involves the production of concrete using two silos, a weigh-batcher/weigh hopper, discharge chute for truck loadout, conveyors, and other associated equipment. The concrete batch plant has a maximum production limitation of 60,000 yd³ during any calendar year period while in operation. The fabric filters at the silo vents are the emission control device systems used for controlling Particulate Matter (PM) during concrete production from the concrete plant while in operation. The rubber boot at the weigh batcher/weigh hopper and the hood at the discharge chute/truck loadout are the emission control device systems used for controlling Fugitive Particulate Matter (Fugitive PM) during concrete production from the concrete plant while in operation. The PM emissions are emitted as stack emission points at the silos, and fugitive PM from the weigh-batcher, and discharge chute/truck loadout.

The permit will be issued a combined construction/operating permit.

RULES ANALYSIS

Title V Cond. Major Minor Source category listed in 1200-03-09-.01(4)(b)1.(i)? Yes No

Reason for PSD:	New source above ____ TPY	<input type="checkbox"/>	Sig. increase in __*__ emissions	<input type="checkbox"/>	N/A <input checked="" type="checkbox"/>
