Identification indicators of possible streams or wetlands utilizing site information and resources include:

- Contour and stream indicators on USGS TOPO maps
- Drainage area to a defined conveyance (20 acres east TN/40 middle TN/75 west TN),
- agricultural setting Aerial photography identifying a sinuous tree line or grouping of remaining forest in an
- Comparable nearby drainage that has previously been determined to have a stream
- Onsite or adjacent ponds or impoundments Check EFO HD GIS for previous determinations
- NRCS soil maps or Web Soil Survey
- (http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx)
- Wetlands on National Wetlands Inventory: (http://www.fws.gov/wetlands/data/mapper.HTML)

If sufficient indicators exist, a stream determination may need to be performed. Stream determinations must be performed by a QHP.
