 Address:                      Phone:

**Section 4. Project Details** (fill in information and check appropriate boxes)

Site or Project Name: <b>Carothers Crossing Phase 5B</b>		Nearest City, Town or Major Landmark: <b>Cane Ridge Park</b>	
Street Address or Location (include zip): <b>7211 Carothers Road, Nolensville, TN 37135</b>			
County(ies): <b>Davidson</b>		MS4 Jurisdiction: <b>Nashville</b>	Latitude (dd.dddd): <b>35.9834</b>
			Longitude (dd.dddd): <b>-86.6086</b>
Resources Proposed for Alteration: <input checked="" type="checkbox"/> Stream / River <input type="checkbox"/> Wetland <input type="checkbox"/> Reservoir			
Name of Water Resource (for more information, access <a href="http://tdeconline.tn.gov/dwr">http://tdeconline.tn.gov/dwr</a> ): <b>Unnamed Drain to East Branch Hurricane Creek</b>			
Brief Project Description (a more detailed description is required under Section 8): <div style="text-align: right;">Installation of a minor road crossing on Badric Drive (35.9834, -86.6086).</div>			

Does the proposed activity require approval from the U.S. Army Corps of Engineers, the Tennessee Valley Authority, or any other federal, state, or local government agency?       Yes       No

If Yes, provide the permit reference numbers:

Will the activity require a 401 Water Quality Certification:       Yes       No

If Yes, attach any 401 WQC pre-filing meeting request documentation

Is the proposed activity associated with a larger common plan of development:       Yes       No

If Yes, submit site plans and identify the location and overall scope of the common plan of development.

Plans attached?       Yes       No

If applicable, indicate any other federal, state, or local permits that are associated with the overall project site (common plan of development) that have been obtained in the past (e.g., construction general permit and/or other ARAP):

## Application for Aquatic Resource Alteration Permit (ARAP) & State §401 Water Quality Certification

<b>Section 5. Project Schedule</b> (fill in information and check appropriate boxes)	
Proposed start date: <b>Unknown</b>	Estimated end date: <b>Unknown</b>
Is any portion of the activity complete now?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
If yes, describe the extent of the completed portion:	

**The required information in Sections 6-11 must be submitted on a separate sheet(s) and submitted in the same numbered format as presented below. If any question is not applicable, state the reason why it is not applicable.**

Section 6. Description	Attached	Yes	No
6.1 A narrative description of the scope of the project	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.2 USGS topographic map indicating the exact location of the project (can be a photographic copy)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.3 Photographs of the resource(s) proposed for alteration with location description (photo locations should be noted on map)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.4 A narrative description of the <b>existing</b> stream and/or wetland characteristics including, but not limited to, dimensions (e.g., depth, length, average width), substrate and riparian vegetation	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.5 A narrative description of the <b>proposed</b> stream and/or wetland characteristics including, but not limited to, dimensions (e.g., depth, length, average width), substrate and riparian vegetation	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6.6 In the case of wetlands, include a wetland delineation with delineation forms and site map denoting location of data points	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6.7 A copy of all hydrologic or jurisdictional determination documents issued for water resources on the project site	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Section 7. Project Rationale	Attached	Yes	No
Describe the need for the proposed activity, including, but not limited to the purpose, alternatives considered and rationale for selection of least impactful alternative, and what will be done to avoid or minimize impacts to water resources	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

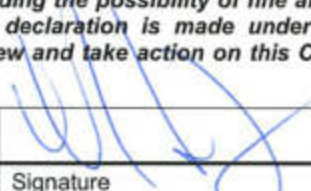

Section 8. Technical Information	Attached	Yes	No
8.1 Detailed plans, specifications, blueprints, or legible sketches of present site conditions and the proposed activity. Plans must be 8.5.x 11 inches. Additional larger plans may also be submitted to aid in application review. The detailed plans should be superimposed on existing and new conditions (e.g., stream cross sections where road crossings are proposed)	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.2 For the proposed activity and compensatory mitigation, provide a discussion regarding the sequencing of events and construction methods and any proposed monitoring	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8.3 Depiction and narrative on the location and type of erosion prevention and sediment control (EPSC) measures for the proposed alterations and any other measures to treat, control, or manage impacts to waters	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Section 9. Water Resources Degradation (degree of proposed impact)
<p>Note that in most cases, activities that exceed the scope of the General Permit limitations are considered greater than <i>de minimis</i> degradation to water quality.</p> <p>Please provide your basis for concluding the proposed activity will cause one of the following levels of water quality degradation:</p> <p><input checked="" type="checkbox"/> a. <i>De minimis</i> degradation, no appreciable permanent loss of resource values</p> <p><input type="checkbox"/> b. Greater than <i>de minimis</i> degradation (if greater than <i>de minimis</i> complete Sections 10-11)</p> <p><i>For information and guidance on the definition of de minimis and degradation, refer to the Antidegradation Statement in Chapter 0400-40-03-.06 of the Tennessee Water Quality Criteria Rule:</i>  <a href="https://publications.tnsosfiles.com/rules/0400/0400-40/0400-40.htm">https://publications.tnsosfiles.com/rules/0400/0400-40/0400-40.htm</a></p> <p><i>For more information on specifics on what General Permits can cover, refer to the Natural Resources Unit webpage at:</i>  <a href="https://www.tn.gov/environment/permit-permits/water-permits/1/aquatic-resource-alteration-permit--arap-.html">https://www.tn.gov/environment/permit-permits/water-permits/1/aquatic-resource-alteration-permit--arap-.html</a></p>

## Application for Aquatic Resource Alteration Permit (ARAP) & State §401 Water Quality Certification

Section 10. Detailed Alternatives Analysis		Attached	
		Yes	No
10.1	Analyze all reasonable alternatives and describe the level of degradation and permanent loss of resource value caused by each alternative. Assessment must consider options other than the "Preferred" and "No Action" alternatives. Provide associated rationale for selecting or rejecting all alternatives considered and demonstration that the least impactful practicable alternative was selected.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10.2	Discuss the social and economic consequences of each alternative	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10.3	Demonstrate that the degradation associated with the preferred alternative will not violate water quality criteria for uses designated in the receiving waters, and is necessary to accommodate important economic and social development in the area	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Section 11. Compensatory Mitigation		Attached	
		Yes	No
11.1	A detailed discussion of the proposed compensatory mitigation. Provide evidence of credit reservation if proposing to utilize a third-party provider.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11.2	Analysis of any proposed appreciable loss of resource value using the TN Stream Mitigation Guidelines. Provide Stream Quantification Tool (SQT) results if applicable. Include Existing Condition Score (ECS) and debit/credit calculations.	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11.3	Describe how the compensatory mitigation would result in no net loss of resource value	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11.4	Provide a detailed monitoring plan for the compensatory mitigation site if permittee-responsible project is proposed	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11.5	Describe the long-term protection measures for the compensatory mitigation site if permittee-responsible project is proposed (e.g., deed restrictions, conservation easement)	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Certification and Signature			
<p>An application submitted by a corporation must be signed by a principal executive officer; from a partnership or proprietorship, by the partner or proprietor respectively; from a municipal, state, federal or other public agency or facility, the application must be signed by either a principal executive officer, ranking elected official, or other duly authorized employee. <b><i>I certify under penalty of law that this document and all attachments were prepared by me, or under my direction or supervision. The submitted information is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment. As specified in Tennessee Code Annotated Section 39-16-702(a)(4), this declaration is made under penalty of perjury. The project proponent hereby requests that the certifying authority review and take action on this CWA 401 certification request within the applicable reasonable period of time.</i></b></p>			
<u>David McGowan Jr.</u>	<u>President</u>		<u>9-19-2022</u>
Printed Name	Official Title	Signature	Date

Note that this form must be signed by the principal executive officer, partner or proprietor, or a ranking elected official in the case of a municipality; for details see **Certification and Signature** statement above. For more information, contact your local EFO at the toll-free number 1-888-891-8332 (TDEC). Submit the completed ARAP Application form (keep a copy for your records) to the appropriate EFO for the county(ies) where the proposed activity is located, addressed to **Attention: ARAP Processing**. You may also electronically submit the complete application and all associated attachments to [water.permits@tn.gov](mailto:water.permits@tn.gov).

**Subject:** COPY of Applicant TDEC 401 Water Quality Certification Pre-Filing Meeting Request Confirmation  
**From:** "TDEC Division of Water Resources" <[noreply+16dee34ceceac9f3@formstack.com](mailto:noreply+16dee34ceceac9f3@formstack.com)>  
**Sent:** 9/13/2022 7:11:23 AM  
**To:** [andersondelk@bellsouth.net](mailto:andersondelk@bellsouth.net);

Dear Applicant,

Thank you for your request for a pre-filing meeting related to an anticipated filing of a Section 401 Water Quality Certification request with the Tennessee Department of Environment and Conservation (TDEC). Due to a recent change in the federal 401 Certification Rules, a pre-filing meeting request is now required at least 30 days before submittal of a 401 Certification request for a federal permitting agency (such as the U.S. Army Corps of Engineers) to consider it to be valid (see 40 CFR § 121.4).

**This automated response confirms TDEC's receipt of your request and fulfills your compliance with the federal rule 40 CFR § 121.4.**

**Please be sure to include this confirmation receipt in your 401 Certification request to the U.S. Army Corps of Engineers when applying for a 404 or Section 10 federal permit (see 40 CFR § 121.5).**

Note that this pre-filing meeting request provision is a federal requirement and is not a part of TDEC's Aquatic Resource Alteration Permitting (ARAP) process. No further action is necessary at this time related to any ARAP application with TDEC. You do not have to wait 30 days to apply for an ARAP permit, and ARAP applications will continue to be processed by TDEC according to state rules and regulations.

Please also note that this online meeting request form that you just filled out, does not serve as an application for any state or federal permit. The Aquatic Resource Alteration Permit forms from TDEC can be found [HERE](#).

Requiring pre-filing meetings to be held for 401 Certification requests is optional for the certifying agency (TDEC). At this time TDEC has chosen not to hold routine pre-application in-person meetings. However, if your project is large, complex, includes on-site mitigation, or otherwise has the potential to significantly impact water resources and you believe that it would be beneficial to schedule a meeting prior to applying for an ARAP permit, please visit our [Regulatory Coordination Web Page for more information](#).

Thank you.

TDEC Division of Water Resources

---

**FORM INFORMATION SUBMITTED:**

Project Name: Carothers Crossing Phase 5B

Project Location: 7211 Carothers Road, Nolensville, TN 37135

County: Davidson

Waterbody: Unnamed Drain to East Branch Hurricane Creek

Project Description: We submitted an NOI for Carothers Crossing Phase 5A, which has a proposed roadway ending at the unnamed drain to East Branch Hurricane Creek. The future Phase 5B is on the other side of the creek and will need an ARAP for roadway crossing and an ARAP for gravity sewer and water crossings. Although Carothers Crossing Phase 5B is a future phase, we were informed by the reviewer of the Carothers Crossing Phase 5A NOI (TNR 246193) that an ARAP for the future crossing in the Phase 5B (not part of the current Phase 5A NOI or construction plans) must be obtained prior to issuance of the 5A NPDES Permit. As such, we are looking to submit the ARAP for the Carothers Crossing Phase 5B creek crossing. The timing of the development for Carothers Crossing Phase 5B is unknown at this time, so there is no current proposed start of construction for Phase 5B and the crossings in the phase.

The future proposed roadway crossing at Carothers Crossing Phase 5B consists of a 2-span concrete slab bridge, 14 feet wide by 5 feet high and is 77 feet long along a 75 degree skew. The development timeframe of Phase

### ROADWAY CROSSING WITH UTILITY– BADRIC DRIVE

*Federal, state, or local permits associated with the overall project site (common plan of development) that have been obtained in the past:*

TNR243031, NR1804.314, NR1804.315, TNR244414, TNR245125

#### ***Section 6 : Description***

##### **(6.1) A narrative description of the scope of the project :**

The future proposed roadway connects Carothers Crossing Phase 5A and the future Carothers Crossing Phase 5B by crossing an unnamed drain of the East Branch Hurricane Creek. We submitted an NOI for Carothers Crossing Phase 5A, which has a proposed roadway ending prior to the buffer of the unnamed drain. The proposed roadway crossing is located in and a part of the future Phase 5B; however, we were informed by the reviewer of the Phase 5A NOI (TNR 246193) that the ARAP for the future crossing must be obtained prior to the issuance of the Phase 5A NPDES Permit. As such, we are submitting this ARAP as requested for the future crossing of the future Phase 5B. The time frame for Phase 5B is unknown at this time with no proposed start of construction on the future phase.

We've met with Metro Planning to discuss the possibility of removing the crossing from the plans, but at this time they insist that the crossing is to remain for connectivity and since it is indicated on the Master Development Plan.

The proposed future crossing in the future Carothers Crossing Phase 5B is approximately 87 linear feet of a two-span, 14 feet wide by 5 feet high bottomless slab bridge (State Drawing No. STD-17-139 or equal) with telecom utility crossing. The underground telecom utility will be installed in the fill above the bridge.

##### **(6.2) USGS topographic map indicating the exact location of the project :**

See attached map

##### **(6.3) Photographs of the resource(s) proposed for alteration with location description :**

See attached photos

**(6.4) A narrative description of the existing stream and/or wetland characteristics including, but not limited to, dimensions (e.g., depth, length, average width), substrate and riparian vegetation :**

There was no flow at the time of examination. It is well defined with bedrock and cobble substrates. The drain is roughly 17' wide with steep eroded banks covered in grass and scattered vegetation.

**(6.5) A narrative description of the proposed stream and/or wetland characteristics including, but not limited to, dimensions (e.g., depth, length, average width), substrate and riparian vegetation :**

The existing drain characteristics upstream and downstream of the proposed bottomless slab bridge are to be maintained. The slopes along the headwall are to be stabilized using rip rap. Graded slopes are to be 3 to 1 slopes maximum.

**(6.6) In the case of wetlands, include a wetland delineation with delineation forms and site map denoting location of data points :**

Not applicable

**(6.7) A copy of all hydrologic or jurisdictional determination documents issued for water resources on the project site :**

A copy of the Hydrologic Determination and Wetland Delineations report for Carothers Crossing Phases 5A, 5B, and 10-Section 2A, prepared by BDY Natural Science Consultants on March 14, 2022, has been included in the ARAP submittal.

A copy of the Hydrologic Determination (DWR ID No.31057) for Carothers Crossing Phases 5A, 5B, and 10-Section 2A, prepared by TDEC on April 25, 2022 in response to the aforementioned determination report, has been included in the ARAP submittal.

### ***Section 7 : Project Rationale***

The purpose of the proposed project is to provide roadway and utility connection between Phase 5A and Phase 5B within the Carothers Crossing development. The existing drain runs through the length of the entire remaining site, so the crossing provides additional access within the development between both sides of the drain. Additionally, the crossing is indicated on the Approved Master Development Plan for the Carothers Crossing Urban Design Overlay (UDO).

Towards the end of 2021, the Developer originally proposed developing Phase 5 in its entirety. At that time, we considered the option of removing the crossing from the plans in order to minimize impacts to the stream since there would still be sufficient access to the entire Phase. Since the crossing is called for on the UDO Master Development Plan, we met with Metro Planning on January 13, 2022 to discuss the possibility of removing the crossing from the plans. It was deemed by Metro that they wanted the crossing to remain for connectivity, especially pedestrian connectivity, and due to the crossing being indicated on the approved Master Development Plan. At that time, the Developer decided to split Phase 5 into Phase 5A and Phase 5B and move forward with the development of Phase 5A.

The proposed roadway was designed to have the least amount of fill at the bridge location possible and a bottomless slab bridge was used to minimize the obstruction to migrating wildlife. The proposed fill is sloped at a 3 to 1 slope from the edge of sidewalk to the toe of slope. This was to minimize the width of the proposed crossing.

An alternative to the proposed slab bridge would be to install a span bridge. While this would limit the fill and the enclosure of the crossing, it would be significantly more expensive. The price of such a bridge would be more than could be justified for such a development.

## ***Section 8 : Technical Information***

- (8.1) Detailed plans, specifications, blueprints, or legible sketches of present site conditions and the proposed activity. Plans must be 8.5 x 11 inches. Additional larger plans may also be submitted to aid in application review. The detailed plans should be superimposed on existing and new conditions (e.g., stream cross sections where road crossings are proposed) :**

See attached detailed plans

- (8.2) For the proposed activity and compensatory mitigation, provide a discussion regarding the sequencing of events and construction methods and any proposed monitoring :**

**Proposed Sequence of Events :** 1) Install perimeter silt fence. Any flow at time of construction to be blocked off and diverted using coffer dams, geotextile tubes, and/or pumps. 2) Area to be grubbed. Disturbance of the area to be done no greater than 20 days prior to planned grading or construction activity. 3) Bridge footing locations are to be excavated to suitable material. All excavation to be done by hoe ram. 4) Bridge to be constructed. 5) Backfill along bridge sides to be done as shown on bridge plans. 6) Remaining area to be filled as shown on approved plan. Silt fence, rip rap, and slope protection to be installed as shown on plan. All disturbed areas are to be seeded and strawed, unless planned grading activities are to resume within 14 days. 7) Install underground utilities in fill above bridge. 8) Roadway construction. 9) Final stabilization.

**Construction Methods:** Excavation to be done by hoe ram. Back fill around bridge to be done as shown on state standard details or bridge plan. Any unsuitable material excavated is to be removed from crossing area and disposed of properly.

- (8.3) Depiction and narrative on the location and type of erosion prevention and sediment control (EPSC) measures for the proposed alterations and any other measures to treat, control, or manage impacts to waters :**

Silt fence will be used to limit the amount of sediments being discharged. 3 to 1 slopes are to be stabilized with erosion control matting, and rip rap is to be used to stabilize the slopes along the banks of the wingwalls. All work to be in the dry by the contractor using coffer dams, geotextile tubes, and/or pumps. (see attached plan)

## ***Section 9 : Water Resources Degradation (degree of proposed impact) :***

### **Will only cause de minimis degradation to water quality**

Since there is no known start of construction date for Phase 5B and this ARAP is being submitted as requested by the reviewer of the Phase 5A NOI, there will be no degradation during the construction of Phase 5A. All Phase 5A construction activities will be outside of the 30 foot minimum buffer and a 60 foot average buffer shall be maintained during Phase 5A construction.

## ***Section 10 : Detailed Alternative Analysis***

**(10.1) Analyze all reasonable alternatives and describe the level of degradation and permanent loss of resource value caused by each alternative. Assessment must consider options other than the “Preferred” and “No Action” alternatives. Provide associated rationale for selecting or rejecting all alternatives considered and demonstration that the least impactful practicable alternative was selected :**

See Section 9.

**(10.2) Discuss the social and economic consequences of each alternative :**

See Section 9.

**(10.3) Demonstrate that the degradation associated with the preferred alternative will not violate water quality criteria for uses designated in the receiving waters, and is necessary to accommodate important economic and social development in the area :**

See Section 9.

## ***Section 11 : Mitigation***

**(11.1) A detailed discussion of the proposed compensatory mitigation. Provide evidence of credit reservation if proposing to utilize a third-party provider :**

See Section 9.

**(11.2) Analysis of any proposed appreciable loss of resources value using the TN Stream Mitigation Guidelines. Provide Stream Quantification Tool (SQT) results if applicable. Existing Condition Score (ECS) and debit/credit calculations :**

See Section 9.

**(11.3) Describe how the compensatory mitigation would result in no net loss of resource value :**

See Section 9.

**(11.4) Provide a detailed monitoring plan for the compensatory mitigation site if permittee-responsible project is proposed :**

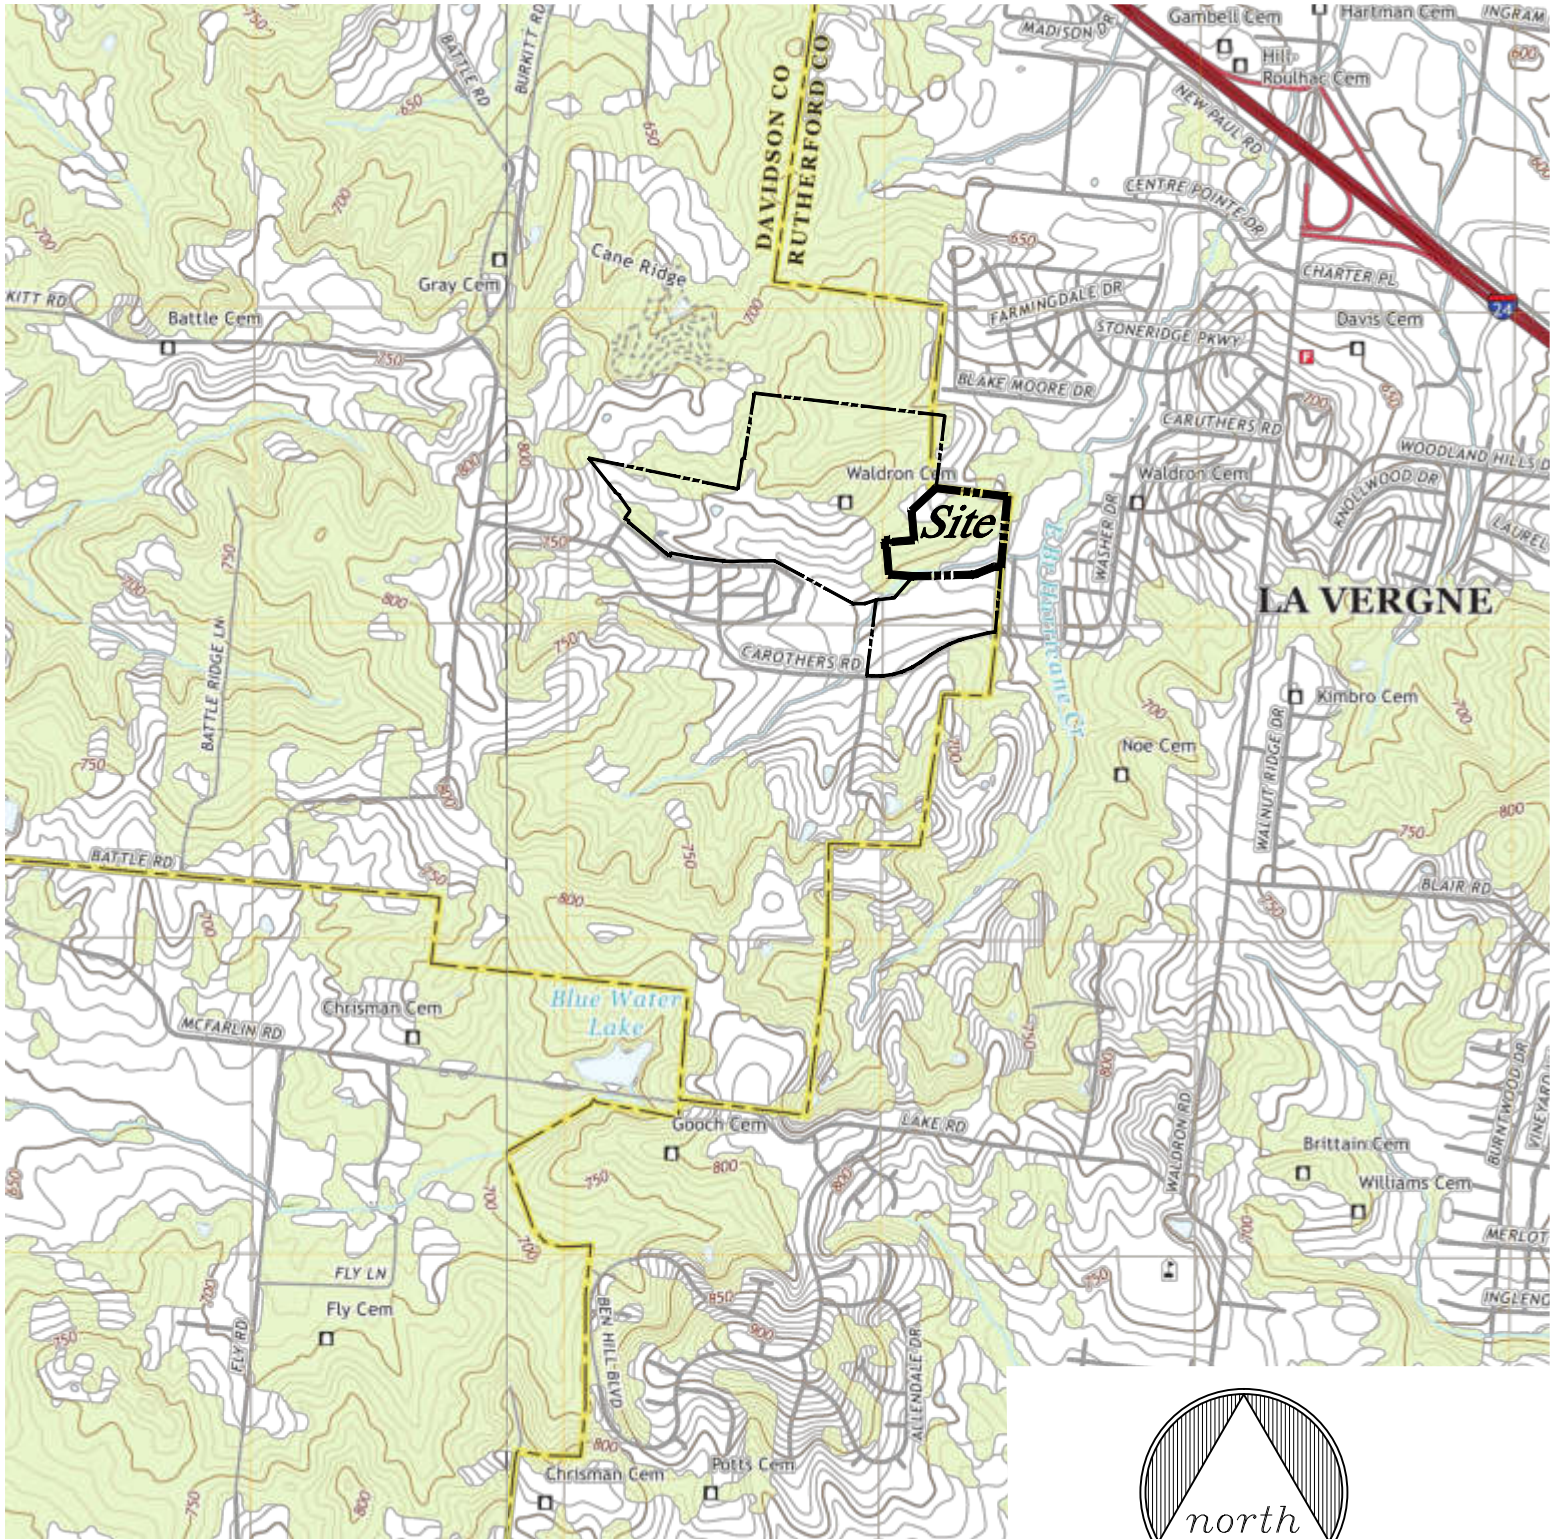

See Section 9.

**(11.5) Describe the long-term protection measures for the compensatory mitigation site if permittee-responsible project is proposed (e.g., deed restrictions, conservation easement) :**

See Section 9.

Re: Hydrologic Determination (DWR ID No.31057)  
Carothers Crossing, Phases 5A, 5B, and 10-Section 2A,  
Nashville, Davidson County, Tennessee

Dear Landowner:

On March 14, 2022, the Division of Water Resources (division) received a jurisdictional waters report submitted on your behalf by Silas Mathes with, BDY Environmental LLC. These water features are located on property located at: 35.984833, -86.611243 (Lat/Long), in Nashville, Davidson County, Tennessee. Please note that all geographic coordinates provided in this letter have a limited precision and should be considered approximate.

Please see the attached map and table for a summary of the jurisdictional determinations made by the division for the water features on site. These determinations are based on the information and documentation in the submitted report as well as the division's observations, rules, and guidance regarding hydrologic determinations.

Alterations to streams, wetlands, or other waters may only be performed under the coverage of, and conformance to, a valid *Aquatic Resource Alteration Permit (ARAP)* issued by the division, except where authorized by Rule. ARAP applications and provisions are available on-line at <http://www.tn.gov/environment/article/permit-water-aquatic-resource-alteration-permit>.

Any alterations to wet weather conveyances must be made in accordance with the requirements of Tenn. Code Ann. § 69-3-108(q).

Hydrologic determinations are advised and governed by Tennessee Department of Environment and Conservation (TDEC) rules and regulations, and therefore only apply to the State's

April 25, 2022

Page 2 of 11

permitting process. Because these and other various water features on-site may potentially also be considered jurisdictional Waters of the United States, any alterations to them should only be performed after consultation with the U.S. Army Corps of Engineers.

Discharges and alterations to sinkholes may require the submittal of an application and written authorization under the provisions of TDEC Rules. You may contact Mr. Brian Ham at (615) 532- 9224 to help identify permit requirements related to sinkhole alterations.

If the disturbed area of this project is one acre or greater, coverage under the *General NPDES Permit for Stormwater Discharges from Construction Activities (CGP)* will be required from this division before any clearing or earth moving activities are started. Information on the construction stormwater permit is available online at <http://www.tn.gov/environment/article/permit-water-npdes-stormwater-construction-permit>.

I appreciate the opportunity to assess the water features on site prior to site plan finalization and initiation of construction activities. Because natural variation and human activities can alter hydrologic conditions, the division reserves the right to reassess the status of the water features in the future.

Thank you for your interest in water quality in Tennessee. If you have any questions or need additional information, please contact me at 615-714-0730 or by email at [Virginia.Lawrence@tn.gov](mailto:Virginia.Lawrence@tn.gov).

Sincerely,

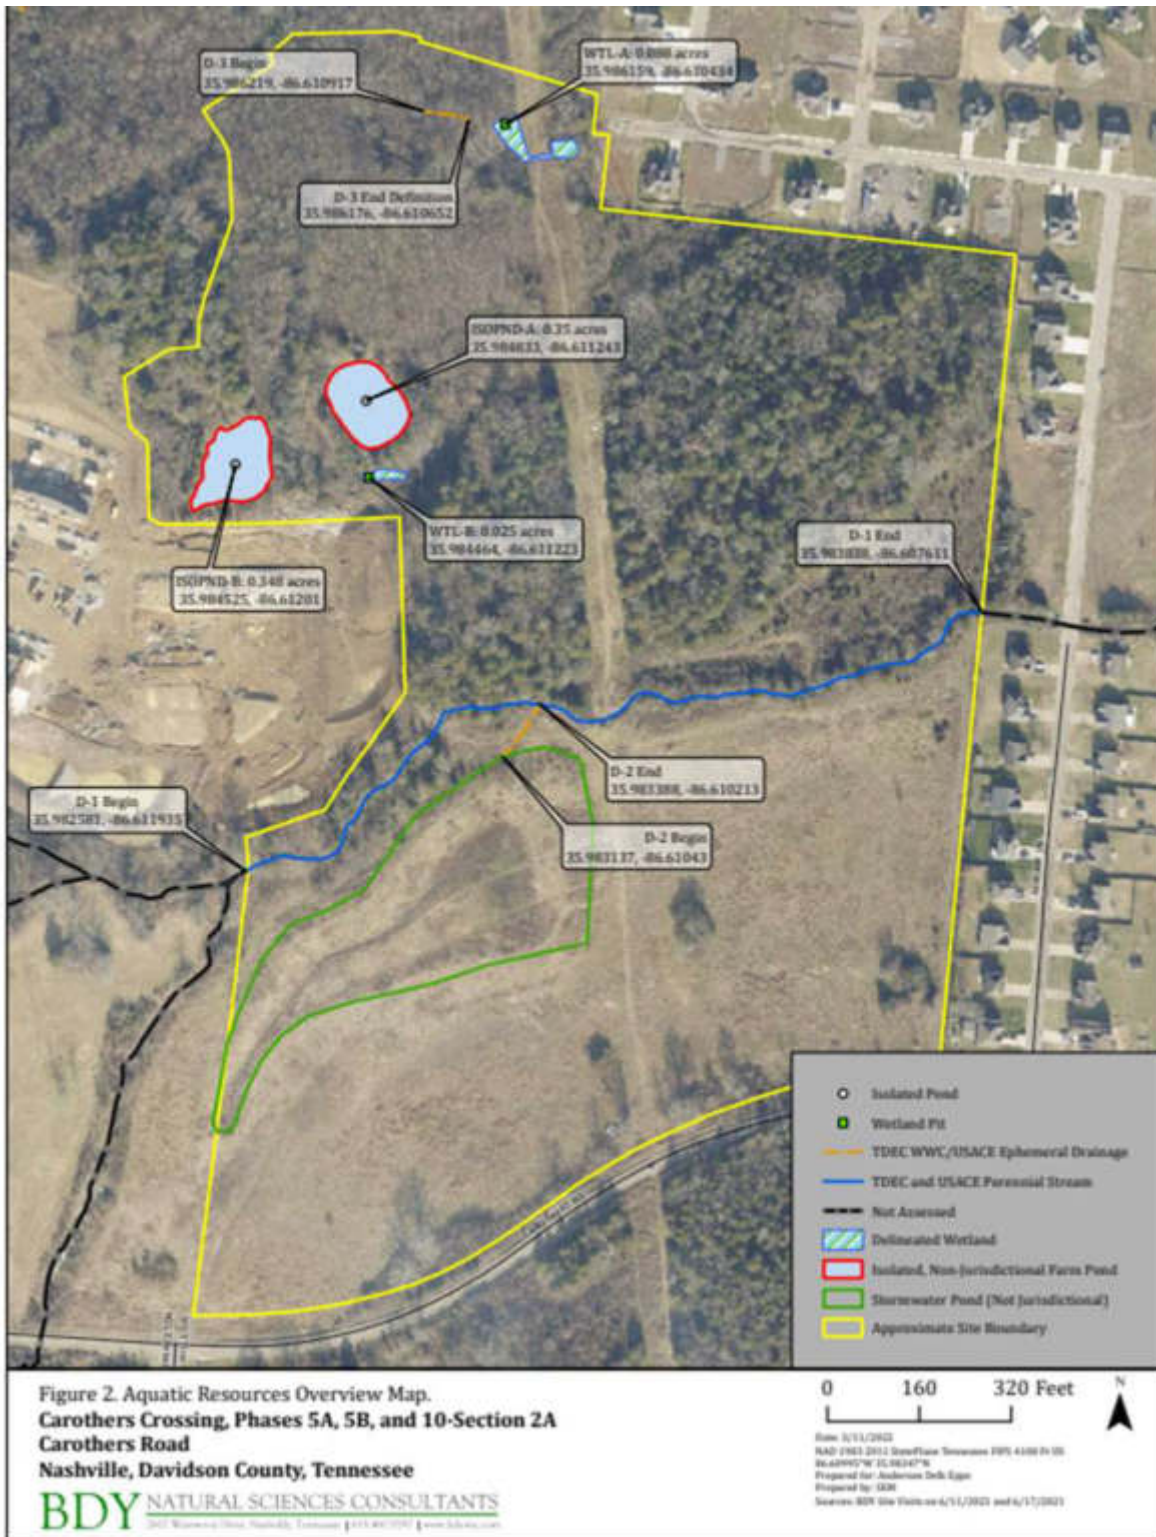

A handwritten signature in cursive script, appearing to read "Virginia Lawrence".

Re: Hydrologic Determinations and Wetland Delineations  
East Branch Hurricane Creek and Unnamed Tributaries  
Carothers Crossing Phases 5A, 5B, and 10-Section 2A  
Carothers Road  
Nashville, Davidson County, Tennessee

Dear Mr. Jennette:

BDY Environmental LLC (BDY) has conducted hydrologic determinations for 3 watercourses on approximately 52-acres located north of Carothers Road in the Carothers Crossing Residential Development (Phases 5 and 10) in Nashville, Davidson County, Tennessee. We are forwarding the accompanying Hydrologic Determination Field Data Sheets, figures, and representative photographs, which are provided in support of our determinations that the assessed watercourses are either wet-weather conveyances or streams, as defined by Tennessee statute and associated administrative regulations.<sup>1,2</sup>

BDY also conducted delineations for 2 wetlands identified on the site based on guidelines established in the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region (Version 2.0)*. Tables, maps, field data sheets, and photos supporting these delineations are also included in this report.

This report is submitted on behalf the project engineer, Anderson Delk Epps and Associates at the request of the property owner/developer:

Regent Development, LLC  
David McGowan  
6901 Lenox Village Drive, Suite 107  
Nashville, TN 37211  
615-333-9000  
[davidmcgowan@regenthomestn.com](mailto:davidmcgowan@regenthomestn.com)

The purpose of this report is to obtain TDEC's concurrence with these hydrologic determinations and wetland delineations to inform site planning for a proposed residential development. The project may require watercourse and/or wetland alterations; however, the developer is considering

<sup>1</sup> Tennessee Code Annotated §69-3-103 (38) & (43) (A-D)

<sup>2</sup> TDEC Rules of the Tennessee Water Quality Control Board 1200-04-03-.04 (23, 28)

March 14, 2022  
 Mr. Timmy Jennette  
 Carothers Crossing Phases 5A, 5B, and 10-Section 2A HD Letter Report

practicable design alternatives to minimize or avoid impacts pending the determination of jurisdiction.

### **Project Site**

The site consists of Phases 5A, 5B, and 10-Section 2A of the Carothers Crossing residential development. The subject phases comprise approximately 52 acres of mixed hardwood and eastern red cedar forest, with a TVA utility line corridor in the eastern portion of the site, and a large, currently unused detention area and pasture in the southern portion of the site. Site topography is characterized by a rolling central ridge and a west-east trending stream valley. Small karst depressions are scattered across the site. Two farm ponds are located on the site. Surrounding land use consists of forest to the north, ongoing Carothers Crossing development areas to the west, and residential subdivisions to the east. Water features on the site have diminished resource value due to erosion from historic agricultural and silvicultural practices.

The site is mapped on the US Geological Survey (USGS) Smyrna 7.5-minute Topographic Quadrangle (see Figure 1). The topographic map depicts a single stream, a tributary to East Branch Hurricane Creek, in the southern portion of the site. The site lies within the Hurricane Creek watershed, 12-digit hydrologic unit code (HUC) [051302030304]. East Branch Hurricane Creek is listed by TDEC as impaired due to sedimentation/siltation from development/channelization, and due to alteration in streamside or littoral vegetative covers due to channelization. The US Fish and Wildlife Service National Wetland Inventory (NWI) Mapper identifies the same unnamed tributary to East Branch Hurricane Creek as the USGS Topo and additionally depicts 2 farm ponds (PUBH) on the site (see attached NWI overview map). A soil map from the Natural Resources Conservation Service (NRCS) Web Soil Survey is also included with this letter. Based on a review of NRCS soils data, no hydric soils are mapped on the site. Soils mapped along watercourses are the Arrington silt loam, the Talbott-Rock outcrop complex, and the Hampshire silt loam.

### **Hydrologic Determinations**

Silas Mathes (TNQHP #1112-TN13) and Hali Steinmann conducted the hydrologic determinations of the 3 watercourses within the subject site's boundaries on June 17 and June 22, 2021. Table 1 lists the dates for each watercourse assessment as well as previous rainfall as measured at the Nashville International Airport.

*Table 1: HD/Wetland Assessment Dates and Previous Rainfall*

<b>Date Assessed</b>	<b>Features</b>	<b>7 Day Previous Rain (in.)</b>	<b>48 Hour Previous Rain (in.)</b>	<b>90 Day Climate Analysis</b>
6/17/2021	D-2, Wetland A	0.20	0	Normal
6/22/2021	D-1, D-3, Wetland B	0.26	0.07	Normal

March 14, 2022  
Mr. Timmy Jennette  
Carothers Crossing Phases 5A, 5B, and 10-Section 2A HD Letter Report

A 90-day antecedent precipitation analysis data sheet and raw precipitation data are attached. Summary sheets generated by the US Army Corps of Engineers Antecedent Precipitation Tool are also included.

BDY identified 2 wet weather conveyances and 1 jurisdictional stream (see Table 2 immediately following this letter). Both of the site's wet weather conveyances are shallow channels dominated by soil substrate well above subsurface bedrock. D-2 is an artificial stormwater outlet channel leading from a large detention pond on the site. D-3 is a short erosional feature that loses definition above Wetland A. These channels exhibit poor to moderate bed and bank differentiation with limited to no connection to subsurface flow inputs. During site visits, wet weather conveyances were dry and BDY observed no macrobenthos.

D-1 is a well defined, obvious stream with bedrock and cobble substrates and multiple connections to subsurface seepage. BDY observed fish and multiple populations of wood- and stone-case building caddisfly larvae in D-1.

Representative photographs of the watercourses are attached. Figure 3A provides photo locations. Hydrologic Determination Field Data Sheets for the assessed watercourses are also included.

### **Non-Jurisdictional Farm Ponds**

Two artificial, isolated farm ponds are located on the Site. Neither feature has inlet or outlet channels. Both features have large, constructed berms to hold back water, and appear to retain water throughout the year, sourced from direct precipitation and gathered sheetflow. Both ponds have clay liners. As the features are isolated from groundwater and surface water connections, we assert that they are not jurisdictional and respectfully ask for your concurrence.

### **Wetlands**

BDY identified and delineated 2 jurisdictional wetlands on the site. These wetlands were delineated utilizing the protocols outlined in the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Eastern Mountains and Piedmont Region (Version 2.0)* and in *NRCS Field Indicators of Hydric Soils in the United State Version 8.2, 2018*. BDY field mapped wetland boundaries using a sub-meter accuracy GPS unit with positioning corrections tied to the TN Department of Transportation reference network. BDY also completed wetland determination data forms for 2 upland locations near the delineated wetlands.

Both wetlands are shallow seasonally saturated features with no inlet or outlet channels. Wetland A consists of a small valley blocked by the utility line easement on the site and the berm of a silted pond further downslope. Wetland B is a shallow depression with vehicle ruts that collects shallow hillslope seepage on compacted soils below the steep berm of Isolated Pond A.

March 14, 2022  
Mr. Timmy Jennette  
Carothers Crossing Phases 5A, 5B, and 10-Section 2A HD Letter Report

A summary table for the two wetlands and their corresponding upland sample pits is included as Table 3 immediately following the body of this letter. Eastern Mountains and Piedmont Wetland Determination Data Forms completed during the delineation are included with this report and photos are also provided in the attached photo page. Photo locations are mapped on Figure 3A and wetland delineation points and sample pit locations are mapped on Figure 3B.

### **Request for Concurrence**

We attest that all information submitted herein and in the accompanying attachments is true, accurate, and complete. We appreciate your review of this information and request your concurrence of our jurisdictional determination. Please contact us at (615) 812-8960 if we may provide additional information or address your questions regarding our findings.

Very truly yours,

BDY ENVIRONMENTAL LLC

3. Watercourse dry anytime during February through April 15th, under normal precipitation / groundwater conditions		WWC	X N/A
4. Daily flow and precipitation records showing feature only flows in direct response to rainfall		WWC	X N/A
5. Presence of multiple populations of obligate lotic organisms with ≥ 2 month aquatic phase	X	Stream	
6. Presence of fish (except <i>Gambusia</i> )	X	Stream	
7. Presence of naturally occurring ground water table connection	X	Stream	
8. Flowing water in channel and 7 days since last precip >0.1" in local watershed	X	Stream	
9. Evidence watercourse has been used as a supply of drinking water	X	Stream	

**NOTE: If any Primary Indicators 1-9 = "Yes", then no further investigation is necessary. However, assessors may choose to score secondary indicators as supporting evidence.**

In the absence of a primary indicator, or other definitive evidence, complete the secondary indicator table on page 2 of this sheet, and provide score below.

Guidance for the interpretation and scoring of both the primary & secondary indicators is provided in *TDEC-WPC Guidance For Making Hydrologic Determinations, Version 1.5*

**Overall Hydrologic Determination = Wet Weather Conveyance**

**Secondary Indicator Score (if applicable) = 2.5 OR N/A**

**Justification / Notes :**

Short, fescue-lined artificial swale leading from large detention pond. Soil exposed in bed in only two locations. Rip-rap present at either end of reach. No biology indicators present. No evidence of subsurface seep connections; channel flows very infrequently and is elevated above typical pool level of detention area (detention pond does not appear to receive flows from impervious areas or other stormwater infrastructure). Mowed infrequently.

## Secondary Field Indicator Evaluation

<b>A. Geomorphology</b> (Subtotal = 1.5 )	<b>Absent</b>	<b>Weak</b>	<b>Moderate</b>	<b>Strong</b>
1. Continuous bed and bank	0 ✓	1	2	3
2. Sinuous channel	∅ ✓	1	2	3
3. In-channel structure: riffle-pool sequences	∅	1	2	3
4. Sorting of soil textures or other substrate	∅	1	2	3
5. Active/relic floodplain	∅	0.5	1	1.5
6. Depositional bars or benches	∅	1	2	3
7. Braided channel	∅	1	2	3
8. Recent alluvial deposits	∅	0.5	1	1.5
9. Natural levees	∅	1	2	3
10. Headcuts	∅	1	2	3

13. At least second order channel on existing USGS or NRCS map	No = 0 ✓		Yes = 3	

<b>B. Hydrology</b> (Subtotal = 0.5 )	<b>Absent</b>	<b>Weak</b>	<b>Moderate</b>	<b>Strong</b>
14. Subsurface flow/discharge into channel	∅	1	2	3
15. Water in channel and >48 hours since sig. rain	∅	1	2	3
16. Leaf litter in channel (January – September)	1.5	1	0.5	0
17. Sediment on plants or on debris	0 ✓	0.5	1	1.5
18. Organic debris lines or piles (wrack lines)	0 ✓	0.5	1	1.5
19. Hydric soils in channel bed or sides of channel	No = 0 ✓		Yes = 1.5	

N/A  
N/A

<b>C. Biology</b> (Subtotal = 0.5 )	<b>Absent</b>	<b>Weak</b>	<b>Moderate</b>	<b>Strong</b>
20. Fibrous roots in channel bed <sup>1</sup>	3	2	1	∅
21. Rooted plants in the thalweg <sup>1</sup>	3	2	1	∅
22. Crayfish in stream (exclude in floodplain)	∅	1	2	3
23. Bivalves/mussels	∅	1	2	3
24. Amphibians	∅	0.5	1	1.5
25. Macroinvertebrates (record type & abundance)	∅	1	2	3
26. Filamentous algae; periphyton	∅	1	2	3
27. Iron oxidizing bacteria/fungus	∅	0.5	1	1.5
28. Wetland plants in channel bed <sup>2</sup>	0	0.5 ✓	1	1.5

<sup>1</sup> Focus is on the presence of terrestrial plants.

<sup>2</sup> Focus is on the presence of aquatic or wetland plants.

Total Points = 2.5

*Under Normal Conditions, Watercourse is a Wet Weather Conveyance if Secondary Indicator Score < 19 points*

### Notes :

1. Artificial stormwater swale leading from large detention pond; poorly defined banks with bed almost completely covered by upland vegetation (fescue). 2. One bend 3. No riffles or pools present. 10/11. No headcuts. 12. Weak natural valley (side of larger floodplain). 14/15 No water present, no evidence of subsurface inputs. Detention structure rarely outlets to channel. 16. No trees present within detention pond or area surrounding channel. 17. minor stains on grass. 18. minor amount of in-channel wrack at bottom of reach. 20. Strong fibrous roots throughout. 21. Fescue chokes thalweg. 22-27 not present. 28. FAC scattered at bottom.
