**Subject:** RE: Biosolids Application

Good Afternoon,

I will need the lab reports for pollutant limits, pathogen reduction (Alternative 1), vector attraction reduction (Option 4), and PCB/TCLP results. Additionally, a narrative describing method of land application, site plans for the land application sites including detailed maps or visuals denoting water quality setbacks. The application rate will also need to be determined using the values for Ammonia Nitrogen, Nit-Nit Nitrogen and TKN.

Based on the application submitted, a number of these procedures have already transpired. I will just need to verify with the results.

Let me know if you have any questions.

Thank you,

**Anastasia Sharp, E.I.** | Environmental Protection Specialist II
