Steve/Alex,

I would like to observe the testing if my schedule allows, but don't let my schedule slow you down from completing and documenting the tests.

Thank you,
George M. Thornsby

I have BWSC set up to go out and stake this point in the next couple of days. I will then work on getting the test dig performed at this location.

Thank you,
Alex

My first suggestion is that a physical excavations be done at this point and adjacent points to verify it is not just a survey error.

Steve,

I have completed the review and I have only found one additional item that needs to be addressed. On the "Grid Point Data" it appears that point 10244 is less than half of the required thickness for the clay layer. If it was only a tenth of foot, it could fall into "construction error, but it less than half of the required thickness. Please address our concerns at Grid Point 10244 and the areas between it and the other grid point that do have 2.0 feet of compacted clay, to ensure that 2.0 feet of compacted clay is in-place.

Thank you,
George M. Thornsby
