Subject: 2015 vegetation control permits @Reelfoot WMA

Here are this year's herbicide applicants for this year. Without the ability to treat unwanted vegetation at the waterfowl blind sites, most of the prime waterfowl hunting areas at Reelfoot would be lost

To: Alan Peterson, WildlifeManager 5

From: Jeff Martin, Wildlife Manager 2

Subject: 2015 Vegetation Permits

Date: November 4, 2015

The intent of this memorandum is to provide an annual report on chemical control of aquatic plants at Reelfoot Lake WMA by individuals to TDEC – Division of Water Pollution Control. The attached will provide the information on the individual permits. This report is required as part of the permitting process.

Ten permits were applied for and approved. Higher than normal lake levels through the growing season as well as TWRA's spraying program has greatly reduced the number of individual permits needed.

All common and scientific names were adopted from the University of Florida – Center for Aquatic and Invasive Plants, except on local name was added.

Swamp loosestrife (water willow) – Decodon verticillatus

Water pennywort – Hydrocotyl rannunculoides

Giant cutgrass – Zioniopsis miliacea

Fragrant water lilly – Nymphacea odorata

Forgbit - Limnobium spongia

There are 2 chemicals applied for use. Trade and chemical names are as follows:

Rodeo – glyphosphate

2,4,D – phenoxy carboxylic acid (numerous brand names and trade names for both liquid and pellets)

See attached spread sheet
