WTP NPDES Compliance Evaluation Inspection

Date: 2/21/2023	NPDES: 7NO079049
Facility: Byrdstown WTP	
Address: 4092 Water	Plant Rd.
city: Byrdstown State:	TN zip: 38549
contact: Marcon Harmon	Title: Superintendent
Phone 1: (931)864-3859	Phone 2:

1. **Permit Verification**

Yes	No	Inspection Observation to Verify Information Contained in Permit
V		1. Current Copy of Permit on-Site?
V		2. Correct Name and Mailing Address
		3. Type of Facility
V		4. Facility is as Described in Permit
~		5. State has been notified of new, different increased discharges, if any
1		6. Number and Location of Discharge Points as Described in Permit
V		7. Name and Location of Receiving Waters Correct
V		8. All Discharges Permitted

H. **Recordkeeping and Reporting Evaluation**

Yes	Yes No	Records and Reports Maintained as Required By Permit	
V		1. All Information available, complete, and current	
V		2. Information retained for 3 + years	
V	7/-10	3. Sampling and Analysis Data are Adequate and Include:	

	a. Dates, times, location of sampling
V	b. Initials of Individual Performing Sampling
V	c. Approved Methods
	d. Results of Analyses and Calibration
V	e. Dates and Time of Analysis
V	f. Initials of Person Performing Analysis
0	4. O & M Manual
V	5. As-built & State Approved Plans and Specifications

Yes	No	DMR Completion Meets the Self-Monitoring Reporting Requirements
V		Analytical Bench Sheets Consistent with the Dates on the DMR
V		2. All data that is Collected is Summarized on the DMR
V		3. Number of Exceedences Column Id Completed Correctly

III. Facility Site Review Checklist

Yes	No	Treatment Facility Properly Operated and Maintained	
	-	1. Standby Power or Other Equivalent is Provided	
		2. Alarm System for Power and/or Equipment Id Provided	
	V	a. During Power Fallures, have you experienced any problems	
1			
	1	b. Are there untreated bypass discharges during power failures	
		3. Sludge Disposal Procedures are Appropriate	
L		a. Disposal of Sludge According to Federal, State, and Local Regulations	
V	1	b. Disposal Sites Approved by State	
~		4. Sufficient Sludge is Disposes of to Maintain Treatment Integrity	
100		If Not, Why	
V		5. Preventative Maintenance Schedules Established and Performed	
V		6. O & M Adequate	
1/		7. Consulting Engineer on Retainer	

IV. Flow Measurement Checklist

Yes	No	Flow Measurements Meeting Requirements and Intent of Permit	
1		1. Outfall Inspection by Operator	
		Frequency: Daily	
/		2. Effluent Flow Calculated Using Effluent Flow	
		If Not, Explain	

V. Laboratory Quality Assurance Checklist

Yes	No	Laboratory Requirements Meet the Requirements of the Permit
	V	1. Are Parameters Other Than Those Listed on the Permit Analyzed For
		If so, What:
V		2. Laboratory Quality Assurance Manual Present
V		3. EPA Approved Analytical Testing Procedures are Used

V		4. Laboratory Instruments Calibrated and Maintained
V		5. Quality Control Procedures in Place
V		6. Duplicate Samples Analyzed
		Frequency:
	1	7. Spiked Samples Analyzed
		Frequency:
V		8. Commercial Laboratory Used
		Name: Pace Analytical
		Address:
		City/State:
		Zipcode:
		Phone:
		Contact:
V		9. Results of Last DMR/QA Test

VI. Laboratory Checklist

V	1. Chlorine Residual (EPA Approved Minimum Detection Level, 0.05 mg/l)
	a. Amperometric Titration
	b. Starch Endpoint
4	c. Colormetric
-	D. Meters Standardized Before Each Day's Use
4	E. Samples Analyzed Within 15 Minutes of Sample Collection
1	f. Samples Analyzed for Total Chlorine, not Free
-	g. Reagents in date
	2. Settleable Solids
L	a. Samples Thoroughly Shaken
r	b. Cobwebs in Imhoff Cone
	c. Correct Procedure (Mix, Cone, 45 Min, Slowly Stir At/Near Top Perimeter of Cone for 15 Min., Read Mark)
	3. Total Suspended Sollds
<i>V</i>	a. Proper Equipment (Vacuum, Filter Holding Mechanism, Drying Oven, etc.)
V	b. Proper Filters (Gelman A/E or Approved by Standard Methods)
V	c. Balance checked with Standard Weights
V	d. Temperature in Drying Oven 103-105°C
	4. pH
U	a. Equipment Can Be Calibrated at Two Points
~	b. Bracketing of pH Samples (7 and 4, or 7 and 10)
-	c. Probe is Temperature Compensating
-	d. Probe Stored in Manufacturers Recommended Solution
	e. Sample Analyzed Within 15 Min. of Collection
~	g. Buffers and storage solutions in date
	5. Iron Storage
	a. P, FP, or G
V	b. HNO ₃ to pH <2
	6. Aluminum Storage

a. P, FP, or G	
b. HNO₃ to pH <2	

*P is for polyurethane, FP is for fluoropolymer, G is for glass

VII.

Yes	No	Permittee Meets the Requirements of the Permit	
V		1. Sampling Locations are as per Premit	
V		2. Sampling and Analytical Constituents and Parameters are as per Permit	
V		3. Sampling and Analytical Frequency is as per Permit	
		4. Sampling Method is as per Permit	
V		5. Sample Collection Procedures Adequate ;	
V		b. Proper Preservation Technique Used	
		c. Containers and sample holding times are correct (40CFR 136.3)	
V		6. Are samples collected and analyzed more often than required in Permit	

The lagoon has been repaired per CAP approved by TDEC. However, the WTP Plans to construct a concrete basin on site. with geotechnical study of concrete basin on site. with geotechnical study of the property a new location was advised doe to the property activity. ARP funds will be used for sink hole activity. ARP funds will be used for construction of new basin.
