**CCR Certification for Community Water Systems with Populations 500-9,999**  
 (Water Systems with mailing waivers for the direct delivery of the Consumer Confidence Report to customers.)

Water System Name: Waverly Water System  
 PWSID Number: TN0000733

The community water system indicated above hereby confirms that the Consumer Confidence Report has been distributed to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the primacy agency.

**Approved CCR distribution methods are outlined below. (Check all that apply.)**

- Published the CCR in the local newspaper(s). (Attach Newspaper page containing CCR.)
- Informed customers the CCR will not be mailed. (Check methods of pre-notification below.)
  - Printed pre-notification in the Newspaper prior to publishing the CCR. (Attach newspaper page containing the pre-notification.)
  - Printed pre-notification on the water bill. (Attach a copy of the Water Bill.)
- Mailed the CCR to customers within the service area. (Attach CCR and mail receipt.)
- Distributed CCR by direct delivery (door-to-door). (Attach copy of CCR and specify method.)
- Distributed the CCR by electronic delivery methods. URL: \_\_\_\_\_
  - Mailed customers a notification containing the URL address that will take customers directly to the CCR on our website or on a publicly available site on the internet. (Attach copies of the CCR and three consecutive month water bills or other direct mail notifications.)
  - Email or other electronic method.
  - Explain in detail: \_\_\_\_\_

**In addition to the above distribution method(s), the following "Good Faith" efforts were used to reach non-bill paying consumers. (Check all that apply and attach lists.)**

- Posted CCR in public places: (City Hall, Library, Water Office, Post Office, etc.)
- Delivered multiple copies to single bill addresses serving several persons: apartments, condominiums, nursing and/or assisted living centers, etc.).
- Delivered to large businesses, factories or community organizations
- Posted the CCR on the Internet at: \_\_\_\_\_
- Issued press release on CCR to news media: (Television, Radio, etc.)
- Electronic newsletter, listserv, social media outlets
- Other: \_\_\_\_\_

**I hereby certify that the information provided is true and correct:**

Name (Print): Jonathan Williams  
 Signature: [Signature]  
 Title: COEDC  
 Phone #: 931-535-2711 Date: 4/19/2024  
 E-mail: jwilliams@waverlytn.org

**CCRs must be delivered by July 1. CCR Certification Forms must be signed and delivered by Oct. 1 to:**  
 Consumer Confidence Report Rule Coordinator, Division of Water Resources, William R Snodgrass Tennessee Tower, 312 Rosa L. Parks Avenue, 11<sup>th</sup> Floor, Nashville, Tennessee, 37243  
 Or email to DWRWater.Compliance@tn.gov Please enter your water system's name, "CCR Certification Form", and your water system's PWSID# in the subject line of the email (e.g., Burlington 2017 CCR Certification Form, TN0000123)

# Waverly Water System Water Quality Report 2023

## Is my drinking water safe?

Yes, our water meets all of EPA's health standards. We have conducted numerous tests for over 80 contaminants that may be in drinking water. As you'll see in the chart on the back, we only detected eight of these contaminants. We found all of these contaminants at safe levels.

## What is the source of my water?

Your water, which is ground water and surface water, comes from a sand aquifer and the Duck River respectively. Our goal is to protect our water from contaminants and we are working with the State to determine the vulnerability of our water source to **potential** contamination. The Tennessee Department of Environment and Conservation (TDEC) has prepared a Source Water Assessment Program (SWAP) Report for the untreated water sources serving this water system. The SWAP Report assesses the susceptibility of untreated water sources to **potential** contamination. To ensure safe drinking water, all public water systems treat and routinely test their water. Water sources have been rated as reasonably susceptible, moderately susceptible or slightly susceptible based on geologic factors and human activities in the vicinity of the water source. The Waverly Water System sources rated as reasonably susceptible to potential contamination.

An explanation of Tennessee's Source Water Assessment Program, the Source Water Assessment summaries, susceptibility ratings and the overall TDEC report to EPA can be viewed online at <https://www.tn.gov/environment/program-areas/wr-water-resources/water-quality/source-water-assessment.html> or you may contact the Water System to obtain copies of specific assessments.

A wellhead protection plan is available for your review by contacting Jon Williams at the Waverly Water System.

## Why are there contaminants in my water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Este informe contiene información muy importante. Tradúscalo o hable con alguien que lo entienda bien.

**For more information about your drinking water, please call Jon Williams at 931-535-2711.**

## How can I get involved?

Our Water Board meets on the second Monday of each month at 5:00 pm at the Municipal court room, which is located at 103 E. Main St.. Please feel free to participate in these meetings.

## Is our water system meeting other rules that govern our operations?

The State and EPA require us to test and report on our water on a regular basis to ensure its safety. We have met all of these requirements. Results of unregulated contaminant analysis are available upon request. We want you to know that we pay attention to all the rules.

## Other Information

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and the Tennessee Department of Environment and Conservation prescribe regulations which limit the amount of certain contaminants in water provided by public water systems. Waverly Water System's water treatment processes are designed to reduce any such substances to levels well below any health concern. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

## Do I Need To Take Special Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have under-gone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about not only their drinking water, but food preparation, personal hygiene, and precautions in handling infants and pets from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

## Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Waverly Water System is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>

## Water System Security

Following the events of September 2001, we realize that our customers are concerned about the security of their drinking water. We urge the public to report any suspicious activities at any utility facilities, including treatment plants, pumping stations, tanks, fire hydrants, etc. to 931-296-1410 or 931-296-7792.

## Think before you flush!

Flushing unused or expired medicines can be harmful to your drinking water. Properly disposing of unused or expired medication helps protect you and the environment. Keep medications out of Tennessee's waterways by disposing in one of our permanent pharmaceutical take back bins. There are nearly 100 take back bins located across the state, to find a convenient location please visit: <http://tdeconline.tn.gov/rxtakeback/>

# Water Quality Data

## What does this chart mean?

- **MCLG** - Maximum Contaminant Level Goal, or the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **MCL** - Maximum Contaminant Level, or the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.
- **MRDL**: Maximum Residual Disinfectant Level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for the control of microbial contaminants.
- **MRDLG**: Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **AL** - Action Level, or the concentration of a contaminant which, when exceeded, triggers treatment or other requirements which a water system must follow.
- **Non-Detects (ND)** - laboratory analysis indicates that the contaminant is not present.
- **Parts per million (ppm)** or **Milligrams per liter (mg/l)** – explained as a relation to time and money as one part per million corresponds to one minute in two years or a single penny in \$10,000.
- **Parts per billion (ppb)** or **Micrograms per liter** - explained as a relation to time and money as one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- **Nephelometric Turbidity Unit (NTU)** - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.
- **RTCR** – Revised Total Coliform Rule. This rule went into effect on April 1, 2016 and replaces the MCL for total coliform with a Treatment Technique Trigger for a system assessment.
- **TT** - Treatment Technique, or a required process intended to reduce the level of a contaminant in drinking water.
- **AVG** - Average

Contaminant	Violation Yes/No	Level Found	Range of Detections	Date of Sample	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Total Coliform Bacteria (RTCR) <sup>4</sup>	No	1		Feb. 2023		0	TT Trigger	Naturally present in the environment
Turbidity <sup>1</sup>	No	0.22		2023	NTU	n/a	TT	Soil runoff
Copper <sup>2</sup>	No	90 <sup>th</sup> %= 0.192		2023	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Fluoride	No	0.696 Avg.	0.607-0.8	2023	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Lead <sup>2</sup>	No	90 <sup>th</sup> %= 1.0		2023	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	No	2.25	2.25*	2023	ppm	N/A	N/A	Erosion of natural deposits; used in water treatment
TTHM [Total trihalomethanes]	No	32.3	21.9-24.5	2023	ppb	n/a	80	By-product of drinking water chlorination
Haloacetic Acids (HAA5)	No	23.5	13.0-17.6	2023	ppb	N/A	60	By-product of drinking water disinfection.
Total Organic Carbon <sup>3</sup>	No	See footnote 3		2023	ppm	TT	TT	Naturally present in the environment.
Chlorine	No	AVG 2.33	1.5-2.9	2023	ppm	MRDLG 4	MRDL 4	Water additive used to control microbes.

<sup>1</sup> 100% of our samples were below the turbidity limit. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system.

<sup>2</sup> During the most recent round of Lead and Copper testing, 0 out of 20 households sampled contained concentrations exceeding the action level

<sup>3</sup> During 2023 we met the treatment technique requirements in 100% of our samples for TOC removal.

<sup>4</sup> During the month of February 2023 one of 10 routine samples tested positive for total coliform. All repeat samples tested negative.

\*We are only required to collect one sample from a single location.

### Unregulated Contaminants: No unregulated contaminants were detected.

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulation is warranted. For additional information call the Safe Drinking Water Hotline at (800) 426-4791.

kburn's voting re-  
e has voted against  
the insulin costs  
0, voted against  
drug costs and  
l expansion, voted  
he child tax credit  
voted against gun  
Marsha Blackburn  
millions of dollars  
ign funds from the  
eutral industry, the  
d the insurance in-  
he called the repeal

of Roe V Wade a blessing  
and supports a Federal abor-  
tion ban. February 29, 2024  
Blackburn was one of 13  
Senators who voted against  
the short-term spending bill  
to help avert a government  
shutdown.

Gloria Johnson told us  
to watch out for House Bill  
1191 and Senate Bill 135  
which says it is a "caption  
bill" about font size on  
some forms. The bills true  
intent gives Charter Schools  
the right of first refusal to  
purchase vacant property  
or to lease underutilized or  
vacant property at or be-  
low fair market value in  
local communities. If they  
purchase this building with  
construction problems the

Local Education Associ-  
ation is on the hook for  
fixing that building up to  
standard, but the building is  
still owned by the Charter  
operator. We know that a lot  
of Charter Schools are gone  
within three years but guess  
who owns the building (the  
Charter operator). Every  
private Charter School that  
opens in your county and  
gives \$7000.00 in vouchers  
to each student will drain  
funds from your Public  
Schools.

Voting and calling your  
Representative is very  
important in letting them  
know how you feel about  
this legislation. This elec-  
tion is critical and your one  
vote can make a difference.

**Tree Giveaway  
 March 8, 2024**

The Humphreys County Soil and Water Conservation District will have their annual Tree Giveaway Friday, March 8, 2024. The Tennessee Division of Forestry will be on hand to answer any planting questions you may have. These seedlings will be given away FREE, at a limited number of seedlings per individual.

The giveaway will be held at the Humphreys County Agriculture Center, 234 West Blue Creek Road, off Highway 13 South, from 8:00 a.m. to 12 noon.

It is recommended that you bring a plastic bag at least 12 inches deep to keep seedling roots cool and moist.

**NOTICE**

The Waverly Water systems 2023 Water Quality Report (CCR) will be published in the News-Democrat on March 20, 2024. The report will not be directly mailed to customers. Copies will be available at Waverly City Hall.

**Thinking About  
 Committing A Crime  
 or manufacturing, buying or selling drugs?**

**If the law enforcement agencies don't find out about you, Humphreys County Crime Stoppers probably will. Better think about the consequences before you act!**

## Waverly Water System Water Quality Report for 2023

### Is my drinking water safe?

Yes, our water meets all of EPA's health standards. We have conducted numerous tests for over 80 contaminants that may be in drinking water. As you'll see in the chart on the back, we only detected nine of these contaminants. We found all of these contaminants at safe levels.

### What is the source of my water?

Your water, which is ground water and surface water, comes from a sand aquifer and the Duck River respectively. Our goal is to protect our water from contaminants and we are working with the State to determine the vulnerability of our water source to potential contamination. The Tennessee Department of Environment and Conservation (TDEC) has prepared a Source Water Assessment Program (SWAP) Report for the untreated water sources serving this water system. The SWAP Report assesses the susceptibility of untreated water sources to potential contamination. To ensure safe drinking water, all public water systems treat and routinely test their water. Water sources have been rated as reasonably susceptible, moderately susceptible or slightly susceptible based on geologic factors and human activities in the vicinity of the water source. The Waverly Water System sources rated as reasonably susceptible to potential contamination.

An explanation of Tennessee's Source Water Assessment Program, the Source Water Assessment summaries, susceptibility scorings and the overall TDEC report to EPA can be viewed online at <https://www.tn.gov/environment/program-areas/wr-water-resources/water-quality/source-water-assessment.html> or you may contact the Water System to obtain copies of specific assessments.

A wellhead protection plan is available for your review by contacting Jon Williams at the Waverly Water System.

### Why are there contaminants in my water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Este informe contiene información muy importante. Tradúscalo o hable con alguien que lo entienda bien.

For more information about your drinking water, please call Jon Williams at 931-535-2711.

### How can I get involved?

Our Water Board meets on the second Monday of each month at 5:00 pm at the Municipal court room, which is located at 103 E. Main St.. Please feel free to participate in these meetings.

### Is our water system meeting other rules that govern our operations?

The State and EPA require us to test and report on our water on a regular basis to ensure its safety. We have met all of these requirements. Results of unregulated contaminant analysis are available upon request. We want you to know that we pay attention to all the rules.

### Other Information

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water:

ations, and wildlife.

- Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA and the Tennessee Department of Environment and Conservation prescribe regulations which limit the amount of certain contaminants in water provided by public water systems. Waverly Water System's water treatment processes are designed to reduce any such substances to levels well below any health concern. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

### Do I Need To Take Special Precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have under-gone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about not only their drinking water, but food preparation, personal hygiene, and precautions in handling infants and pets from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

### Lead in Drinking Water

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Waverly Water System is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>

### Water System Security

Following the events of September 2001, we realize that our customers are concerned about the security of their drinking water. We urge the public to report any suspicious activities at any utility facilities, including treatment plants, pumping stations, tanks, fire hydrants, etc. to 931-296-1410 or 931-296-7792.

### Think before you flush!

Flushing unused or expired medicines can be harmful to your drinking water. Properly disposing of unused or expired medication helps protect you and the environment. Keep medications out of Tennessee's waterways by disposing in one of our permanent pharmaceutical take back bins. There are nearly 100 take back bins located across the state.

## Humphreys County Society

Judy CARTER  
Secretary

The Humphreys County Historical Society held their first meeting of the year on March 7, 2024 at the Torrey Johnson Senior Citizens Center with 15 members and 3 guests present. The meeting was called to order by President, Barbara Breeden and all members joined together and recited the Pledge of Allegiance. We all enjoyed a potluck meal prepared by those present.

Ted Rice, Treasurer, gave his report and mentioned that dues are \$10 per year. Barbara mentioned that she has completed Publications of obituaries for years 2022 and 2023 and they are now at the printers and should be available at our next meeting. Officers for this year remain the same: Barbara Breeden, President, Richard Garber, Vice President, Judy Carter, Secretary, and Ted Rice, Treasurer.

Our speaker for the evening was Nioka Curtis, Tourism Director for Humphreys County. Ms. Curtis assumes the job formerly held by Karin Landers. Nioka was a United Way Director for the County between 2019 and 2023. In February of last year

Nioka accepted a position with the Humphreys County Executive's Office and was appointed Tourism Director in July. She mentioned that she recently attended two conferences on tourism for the county. On the day she was a speaker, she mentioned she had spent the day on a tour of several of the attractions in our county.

Ms. Curtis opened the meeting for discussion among those attending. There was a presentation of some well-known attractions like the Humphreys County Museum/Barn House, Johnsonville Historic Park, and events like the Iris Festival that is an annual event benefiting St. Patrick's in McEwen, the Train Explosion Museum and of course, the Retta Lynn's Ranch events that take place during the year as well as some small jewels that will be elevated to more prominent attention for the county. There was some discussion about the Rock 'N' Roll located on Bold Springs in McEwen that was shown in a commercial for Purina Pro Plan Dog and Tractor Supply Company during Super Bowl.

## PUBLIC NOTICE REQUEST FOR

The Humphreys County, Tennessee is accepting requests for proposals for the Group Major Medical Health, Disability Benefits for Humphreys County Employees and Effective as of August 1, 2024.

Information needed to quote can be obtained from the Employee Benefit Advisor - Tiana Carter at 931-296-1410 or 931-296-7792.

**What does this chart mean?**

- **MCLG** - Maximum Contaminant Level Goal, or the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- **MCL** - Maximum Contaminant Level, or the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.
- **MRDL** - Maximum Residual Disinfectant Level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for the control of microbial contaminants.
- **MRDLG** - Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- **AL** - Action Level, or the concentration of a contaminant which, when exceeded, triggers treatment or other requirements which a water system must follow.
- **Non-Detects (ND)** - laboratory analysis indicates that the contaminant is not present.
- **Below Detection Level (BDL)** - laboratory analysis indicates that the contaminant is not present at a level that can be detected.
- **Parts per million (ppm) or Milligrams per liter (mg/l)** - explained as a relation to time and money as one part per million corresponds to one minute in two years or a single penny in \$10,000.
- **Parts per billion (ppb) or Micrograms per liter** - explained as a relation to time and money as one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.
- **Nephelometric Turbidity Unit (NTU)** - nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.
- **RTCR** - Revised Total Coliform Rule. This rule went into effect on April 1, 2016 and replaces the MCL for total coliform with a Treatment Technique Trigger for a system assessment.
- **TT** - Treatment Technique or a required process intended to reduce the level of a contaminant in drinking water.
- **AVG** - Average

Contaminant	Violation Yes/No	Level Detected	Range of Detections	Date of Sample	Unit Measure	MCLG	MCL	Likely Source of Contamination
Total Coliform Bacteria (RTCR)	No	0		Feb. 2023		0	TT Trigger	Naturally present in the environment
Turbidity <sup>1</sup>	No	0.22		2023	NTU	N/A	TT	Soil runoff
Combined radium	No	1.303	1.136-1.303	2016	PC/l	0	5	Erosion of natural deposits
Copper <sup>2</sup>	No	90th% = 0.192		2023	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
Flouride	No	0.696 Avg.	0.607-.8	2023	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Lead <sup>2</sup>	No	90th%= 1.0		2023	ppb	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits
Sodium	No	2.25	2.25*	2023	ppm	N/A	N/A	Erosion of natural deposits; used in water treatment
TTHM [Total-trihalomethanes]	No	32.3	21.9-24.5	2023	ppb	N/A	80	By-product of drinking water chlorination
Haloacetic Acids (HAA5)	No	23.5	13.0-17.6	2023	ppb	N/A	60	By-product of drinking water disinfection.
Total Organic Carbon	No	See Footnote 3		2023	ppm	TT	TT	Naturally present in the environment.
Chlorine	No	AVG/ 2.33	1.5-2.9	2023	ppm	MRDLG 4	MRDL 4	Water additive used to control microbes.

<sup>1</sup> 100% of our samples were below the turbidity limit. Turbidity is a measure of the cloudiness of the water. We monitor it because it is a good indicator of the effectiveness of our filtration system.  
<sup>2</sup> During the most recent round of Lead and Copper testing, 0 out of 20 households sampled contained concentrations exceeding the action level  
<sup>3</sup> During 2023 we met the treatment technique requirements in 100% of our samples for TOC removal.  
<sup>4</sup> During the month of February 2023 one of 10 samples tested positive for total coliform. All repeat samples tested negative.  
 \*We are only required to collect one sample from a single location.

County Government, Attention: Depa  
 102 Thompson Street, Room 1, Raw  
 37185. Proposals received after this ti  
 will not be considered. Proposals must  
 outside of the envelope:  
**RFP- Insurance Benefits 2024-25**  
 Nothing herein is intended to excl  
 his or her product or service, or in  
 competition. On the contrary, all respor  
 to offer a proposal. Humphreys Count
