---

Neal – I visited the site yesterday and noted three possible streams and a few possible wetlands. Two of the possible streams might be better defined as linear wetlands. Please submit a wetland delineation and hydrologic determination report for the site. Let me know if you have any questions. Thank you,

Jason,

Dry weather seems to be in short supply! While time is not critical, it is in short supply as well. I believe our layout has successfully avoided the minor drains that are present on the site and thereby any potential wetland areas, if any exist. The land application areas do not include any streams. If you need any information or insights that the soils scientists could provide, please feel free to contact them. The soils investigations were performed by Innovative Wastewater Systems, Kevin Davis, (865)776-8771, and Kenton Brotherton, (423)620-0036. I think the TDEC representative who was on site for the pit inspections is Billy Roach.

Neal – There may be a stream and wetland areas on this site based on soil maps and the

aerial photos I've seen. I'll need two days of dry weather before I can look at the site to see if hydrologic determinations or wetland delineations are necessary. If time is an issue, you may want to have a consultant go ahead and assess the site. Thanks,
