CORRECTION REQUEST (CORRECTED)

Just a few modifications/added information is needed

1. Controls appear to be needed at Outfall #1 during the Preliminary EPSC plans. (Controls are needed at every location runoff drains from this site during the initial clearing...) 2. Construction of detention basins should be discussed in the sequence of activities. (If these are to be constructed before any initial clearing activities, then they should be discussed in the Sequence and shown on the drawings as such...) (Please contact Mr. Brian Wallace at Brian.Wallace@tn.gov or 731-571-1280 with any questions or comments.)

See revisions sheet C-3.0. We added a rock filter ring around the existing pipe under Jim Adams Drive that is the outflow from the site. We also updated the EPSC phasing to include the rock filter ring installation and the installation of the detention pond.

Comment

We added to the EPSC phasing on sheet C-3.0. Added installing the filter ring and the detention basin prior to grading operations. Additionally, we added the rock filter ring to the existing concrete pipe on the pre erosion (C-3.0) so that it would be installed at the start of construction to protect the outfall.
