RE: Approval of Construction Quality Assurance Report
Dyersburg City Landfill, Phase II Cell B Construction Activities
SNL 23-000-0218

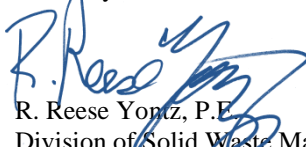

Dear Mr. Ball:

On January 10, 2017, the Division of Solid Waste Management (DSWM) Jackson Environmental Field Office (JEFO) received the certification documents prepared by Construction Material Laboratories (CML) and Smith Seckman Reid, Inc. (SSR) for the construction of Phase II Cell B completed on November 17, 2016. The DSWM has evaluated these documents and conducted field inspections of this site during the construction activity. Additionally, a post-construction visit to the site was conducted on January 11, 2017.

This letter hereby grants approval for the placement of solid waste in Phase II Cell B of the Dyersburg Landfill. Before placement of waste into any sub-cell division, any erosion rills in the sub-cell should be fixed prior to placement of waste into the sub-cell. During placement of the first waste lift, heavy, loaded trucks and compactors must be kept on top of the waste lift and not allowed to run across the drainage layer. Sharp objects and bulky waste should not be included in the first lift. Additionally, care should be taken to keep the first waste lift lightly compacted to facilitate proper leachate drainage. The DSWM asks that the JEFO be contacted prior to initial waste placement in the cell.

If you have any questions concerning this correspondence, please contact Reese Yontz at (731) 512-1376 or by email at Reese.Yontz@tn.gov.

Sincerely,

R. Reese Yontz, P.E.
