Re: 65-0049, Administrative Amendment #2 to 570857, Heraeus Metal Processing, LLC, 1975 Knoxville Highway, Wartburg

Dear Mr. Ritschel,

Your request for an administrative permit amendment was dated November 24, 2020. This amendment was for the purpose of correcting the annual allowable VOC input and emission rates as well as acknowledging the addition of a new product recovery scrubber. Because the new scrubber is used for product recovery and is not a particulate control device, there will be no parametric monitoring requirements for this unit. However, because the incorporation of the new scrubber prior to the baghouse may affect exhaust flow to the scrubber, there is a requirement to conduct a 30-day baghouse pressure drop study after startup of the new scrubber. After the study has concluded, you will be required to submit the results of the study to the Division and also submit a proposed new minimum pressure drop value to the Division. These requirements are defined in the permit conditions for the Rhodium Oil Furnace, Source 65-0049-13. Based on the information contained in your request, Administrative Amendment #2 is enclosed. If you have any questions about this correspondence, please contact Greg Forte at (615) 532- 0548 or via email at Greg.Forte@tn.gov.

Sincerely,

Michelle W. Owenby
Technical Secretary for Air Pollution Control Board.
