AIR CONTAMINANT SOURCE(S) INFORMATION

10. Description of air contaminant source(s) and Unique Source ID(s). List, identify, and briefly describe process emission sources, fuel burning installations, and incinerators that are contained in this application and include a Unique Source ID for each source. The Unique Source ID is a name/number/letter, which uniquely identifies the air contaminant source(s), like Boiler #1, Paint Line #1, Engine #1, etc. (see instructions for more details)

The plant manufactures concrete by mixing limesotne, sand, cement, and fly ash. Concrete is transported in batch trucks to the adjoining casting field. Particulate emissions from cement and fly ash silo vents, and vents from storage containers are controlled by bag filters. Water supression is used to minimize dust from stockpiles and haul roads. Fuel storage tanks on site have submerged fill systems.

Source ID: Concrete Plant #1

11. Is the air contaminant source(s) in a nonattainment area? If "Yes", then minor source BACT must be addressed. Yes ☐ No ☒

Facility has been upgraded to a Erie Strayer model MG-11C.

16. Comments

Location is in association with the U.S. Corp of Engineers. Google Maps indicates the address is 7609 Richardson Landing Road and is listed as USACE Office. Facility is at least partially mobile in that it is moved between this site and one in Louisiana on an annual basis with work being done at one site one year and the other the next year. The facility is considered a Mobile Gravity Central Mix Plant, using crushed limestone, sand, cement, and fly ash to manufacture concrete mats for the US Corp of Engineers. The plant operates from April to September and usually produced concrete at a location every other year.
