## **Executive Summary**

This annual stormwater report covers calendar year 2023 and is prepared in accordance with the Y-12 National Security Complex (Y-12) National Pollutant Discharge Elimination System Permit TN0002968. This is the first full calendar year under the current permit and covers several changes to the stormwater program that Y-12 has successfully implemented.

The results from stormwater sampling are used to evaluate the efficacy of stormwater protections implemented at Y-12. A review of the 2023 stormwater analytical results shows that current stormwater protections are effective at reducing impacts to surface waters at Y-12. There are several construction and demolition activities in progress at Y-12. These include the construction of the Uranium Processing Facility (UPF), the Mercury Treatment Facility (MTF), the Lithium Processing Facility (LPF), the Security Improvement Revitalization Program (SIRP), and the West End Protection Area Reduction (WEPAR) Project. Moving forward, challenges to protect stormwater will continue from most of these projects. Therefore, oversight of construction activities will continue in 2024 and Y-12 will continue to implement appropriate Best Management Practices to protect stormwater runoff.

## **1.0 Introduction**

The Y-12 National Security Complex (Y-12) has successfully implemented a stormwater pollution prevention program in alignment with the requirements of the Y-12 National Pollutant Discharge Elimination System (NPDES) Permit TN0002968. The Y-12 stormwater program focuses primarily on stormwater pollution prevention and continual improvement. It protects the quality of stormwater runoff through:

1. Identifying and properly managing outdoor stormwater pollutant sources
2. Implementing Best Management Practices
3. Sampling stormwater and interpreting data to evaluate efficacy of pollutant controls
4. Conducting routine stormwater inspections and surveillances

## **2.0 Stormwater Monitoring**

For the Y-12 NPDES permit, stormwater monitoring will be performed at category outfalls and wet weather locations. These are described as follows:

1. Category 1 Stormwater Outfalls – annual monitoring of pH
  - Outfalls: 002, 003, 004, 006, 007, 008, 009, 010, 011, 017, S17, S18, 019, 020, 033, 041, 044, 045, 046, 054, 057, 058, 062, 063, 064, 086, 087, 110, 114, 125, 126, 134
2. Category 2 Stormwater Outfalls – annual monitoring of pH and total residual chlorine
  - Outfalls: 034, 042, 071, 083, 088, 099, 113
3. Sector AA Outfalls – annual monitoring of pH, nitrite plus nitrate (as N), total iron, total zinc, total aluminum, total mercury, and flow
  - Outfalls: 014, 016, 047, 048, 067, 102, 135
4. Other Wet Weather – annual monitoring as prescribed in the permit tables.
  - Outfalls: 200 and S30
  - Instream East Fork Poplar Creek Locations: C03, C11, EFP (Station 17)
  - Instream Bear Creek Locations: S06 and S24
  - Instream Monitoring Station: S19

## **3.0 Stormwater Monitoring Results**

Y-12 has completed the stormwater sampling scheduled for sampling year 2023. All stormwater samples were collected as required in the current NPDES permit. The results with alert values and benchmark values were compared to the applicable permit table alert values and daily maximum benchmark values. The 2023 Sampling year ran from October 2022 to the end of September 2023.

### **3.1. Sample Results from Category 1 Stormwater Outfalls**

The results for the stormwater sampling from the Category 1 Stormwater Outfalls are shown on the previously submitted Discharge Monitoring Reports (DMRs). The DMRs were submitted to the Tennessee Department of Environment and Conservation (TDEC) in October 2023. Copies of the submitted DMRs are included in Appendix A.

All Category 1 stormwater sample results were within the typical NPDES permit range for pH of 6.0 and 9.0 standard units (SUs).

### **3.2. Sample Results from Category 2 Stormwater Outfalls**

The results for the stormwater sampling from the Category 2 Stormwater Outfalls are shown on the previously submitted DMRs. The DMRs were submitted to TDEC in October 2023. Copies of the submitted DMRs are included in Appendix A.

All Category 2 stormwater sample results were within the typical NPDES permit range for pH of 6.0 and 9.0 SUs and were less than 0.05 mg/L for Total Residual Chlorine (TRC).

### **3.3. Sample Results from Sector AA Stormwater Outfalls**

The results for the stormwater sampling from the Sector AA Stormwater Outfalls are shown on the previously submitted DMRs. The DMRs were submitted to TDEC in October 2023. Copies of the submitted DMRs are included in Appendix A.

None of the Sector AA stormwater outfall results exceeded the applicable surface water daily maximum benchmarks as described in the permit.

### **3.4. Sample Results from Other Wet Weather Samples**

The results for the stormwater sampling from the Other Wet Weather Sampling category are shown on the previously submitted DMRs. The DMRs were submitted to TDEC in October 2023. Copies of the submitted DMRs are included in Appendix A.

None of the Other Wet Weather category stormwater results exceeded the applicable surface water daily maximum benchmarks or alerts as described in the permit.

## **4.0 Stormwater Pollution Prevention Plan**

Y-12 has developed and implemented a Stormwater Pollution Prevention Plan (SWPPP) addressing the requirements of Part IV of the Y-12 NPDES permit. The SWPPP was developed using the following guidance documents from the Environmental Protection Agency:

- EPA 832-R-92-006, Storm Water Management for Industrial Activities: Developing Pollution Prevention Plans and Best Management Practices
- EPA 833-R-92-002, Storm Water Management for Industrial Activities: Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance

The objective of the SWPPP is to improve site water quality by reducing pollutants associated with stormwater runoff. The SWPPP:

- describes the Y-12 site-wide plan to protect surface waters from pollutants carried by stormwater runoff;
- identifies sources of pollutants that are likely to affect the quality of stormwater discharges; and

- presents best management practices for operations, projects, and other activities to implement proper stormwater pollution prevention and runoff control.

## **5.0 Surveillances and Assessments**

Several surveillance programs are conducted at Y-12. These surveillances serve three main functions:

1. To assess the accuracy of this SWPPP and maps
2. To assess the effectiveness of measures used to reduce pollutants from entering stormwater runoff
3. To assess the need for additional controls to reduce pollutants from entering stormwater runoff

### **5.1. Routine Stormwater Inspection**

As described in the Y-12 SWPPP, personnel with the Environmental Compliance organization conducted routine stormwater inspections in 2023. These inspections rotated through different zones at Y-12 and all zones were completed in 2023. These routine inspections focused on the following:

- Outdoor storage areas
- Signs of spills or potential spill threats
- Good housekeeping practices
- Potential stormwater pollution sources

### **5.2. Semiannual Site Evaluation**

As described in the Y-12 SWPPP, personnel with the Environmental Compliance organization conducted two site-wide semi-annual evaluations. These evaluations included visual inspections of the following:

- Accuracy of the plan and maps
- Adequacy of measures to reduce pollutants in stormwater runoff
- Necessity for additional stormwater controls

### **5.3. Areas of Improvement**

Continual improvement is an aspect of the Y-12 stormwater pollution prevention program. Surveillance activities identified small areas as needing improvement. Identified issues include container storage, outdoor storage, and general housekeeping. Issues are addressed with building or area owners to improve outdoor storage compliance with procedures. In addition, the following activities marked improvements to the stormwater pollution prevention program.

- The Stormwater Pollution Prevention Plan was updated. This will increase awareness and preparedness of Y-12 personnel to help prevent stormwater pollution.
- A third sanitary sewer network was rehabilitated with pipe bursting and manhole repairs. This reduces the risk of sanitary sewer overflows that could impact stormwater quality.

#### **5.4. Areas of Concern**

As a result of site surveillances and inspections, the Y-12 stormwater pollution prevention program has identified the following areas of concern:

- Construction work on the new MTF in the proximity of East Fork Poplar Creek (EFPC) will have potential for impacting surface waters as work progresses. This work is being done under a separate prime contractor at Y-12. Discharges of sediment laden water to Upper EFPC has been noted in the past.
- Impact to EFPC from stormwater run-off from the UPF site will continue to be a concern. Site excavations and heavy truck traffic and movement of materials continues. There are several sedimentation basins for this site, but during periods of heavy rainfall, these basins can become overwhelmed and water quality in EFPC can become adversely affected.
- New construction of the Lithium Processing Facility (LPF) is underway. Concern from this work includes sediment migrating in stormwater runoff, spills of hazardous substances, and the migration of fixed contaminate.

#### **6.0 Conclusion**

Ongoing site operations and new construction activities continue to pose a risk to Y-12 stormwater. Site surveillances continue to identify issues that need to be addressed before they cause a stormwater impact to surface waters. In addition, construction activities continue to pose a risk to stormwater and will continue to have the potential to adversely impact EFPC.

Overall, the housekeeping and general conditions that could impact stormwater continue to improve. Based upon the results of the stormwater sampling and site surveillances, the Y-12 stormwater pollution prevention program is effective at protecting the surface waters at Y-12 from stormwater pollution. Y-12 will continue to seek opportunities for additional improvement to stormwater protections.
